<b>Comments:</b>	This is a planting date trial comparing a 3.6 RM and a 4.1 RM soybean variety. The early planting date was April 10 and the later planting date was May 3. Last year we saw a significant yield jump with the full season line and combined with an earlier planting date. This year's trial does not show an advantage to earlier planting. This could be in part due to the excessive rainfall experienced in April after the early planting date.
