Plot Type		SIDE BY SIDE		<p>Comments: Harvest population was ~ 30k. In this fall-seeded cereal rye cover crop trial there was no yield difference seen with vs. without the covercrop. Stand was destroyed in early spring. Nitrate and Ammonium soil sampling did not reveal any wide variations within treatments. Row length varied due to water hole at end. With (3) replications, no difference in yield stands out.</p>
