**Test Comments:** Jim felt that "field tile" really displayed it's benefit this wet year delivering higher yields in tilled fields. The tests are not tilled. During May/June, water sat in lower areas and corn only produced about 100 bu/acre. The site experienced "drowning early & drought later" this growing season. Some hybrids died early. Lodging is root & stalk combined. Stalk pinch test revealed stalk rot in lower nodes.

† See last page for abbreviation descriptions. Dark colored row identifies the check product found in early- and full-season tests. **Bold** yields are significantly above test average by LSD(0.10). **Italicized** brands exceed the grain moisture limit for this test. **ns** = column values not significantly different
